PaintReady®
Shaker Wall Panel Kit Installation Guide

Please check all components carefully PRIOR to installation, as Richard Burbidge cannot be held responsible for any damage once installation has commenced. .

Before commencing your installation of the Shaker kit, please read this guide carefully. The Shaker kits are supplied in several width/length options however the product can be cut to suit smaller sections if required. Tools Required to complete installation- nail gun, suitable wall adhesive, tape/pencil, tape measure. A laser level is also helpful.

It is important to ensure that the wall/surface you intend to apply the panels to is suitably prepared, make sure the surface is sound and secure. Please note- the shaker kits are primed on all faces with our water-based primer that leaves the perfect surface for your final finish, please choose the correct adhesive for these surfaces.

STEP 1 – MEASURE AND PLAN

Measure and plan. You can sketch out your design on paper. As a starting point it is best to align the middle strip so it is central, the remaining pieces can then be equally spaced throughout, using tape/pencil to set out, a laser level is really helpful for this step.

STEP 2 - FIXING

Once you have worked out the position for each strip and cut (if required) you can begin to install using a suitable wall adhesive on to the back face of each strip, a spirit level will help make sure your timber strips are square, secure with a nail gun into place, repeat for all sections.

STEP 3 - PREPARE FOR PAINTING

Fill any gaps with a suitable filler and sand, decorative caulk can be used for a smooth even finish, wait until dry.

STEP 4 - PAINT/FINISH

Depending on the finish you would like to achieve refer to the manufacturer's guidelines re preparation and finish.

Finishing advice

As well as polyurethane paints there are a number of acrylic/ water-based paints which are solvent free, have a low odour and are extremely quick drying. They also have the advantage of easy brush maintenance and require only a quick rinse with water after use.

PAINTREADY®
READY PRIMED MOULDINGS

PaintReady®
Shaker Wall Panel Kit summary
